Get the auxiliary data

```
source("get_HMRC_aux_data.R")
list1 <- get_HMRC_aux_data()
comcode <- data.frame(Reduce(rbind, list1[1]))
port <- data.frame(Reduce(rbind, list1[2]))
country <- data.frame(Reduce(rbind, list1[3]))
eu_list <- c("BE", "BG", "CZ", "DK", "DE", "EE", "IE", "EL", "ES", "FR", "HR", "IT", "CY", "LV", "LT", "LU", "HU", "MT",
```

Use this line to search for commodity codes using a keyword

```
(comname <- comcode[grep('CHICKEN', toupper(comcode$description)),])
```

```
##      commoditycode parent
## 264      02071110 020711
## 265      02071130 020711
## 266      02071190 020711
## 268      02071210 020712
## 269      02071290 020712

## 268                                                    Frozen fowls of species Gallus domesti
## 269      Frozen fowls of species Gallus domesticus, plucked and drawn, without heads, :
```

—Partners codes

Poland: 616

Spain : 724

Brazil: 76

UK : 826

—Three commodities codes

Chicken: 02071

Cucumber: 070700

Beef: 160250

Set the partner country and the commodity.

Leave the rest to the code: no worries about *arrivals* or *imports*

```
#Define commodity and partner country
com_id <- "160250"
part_id <- 76
#What am I searching for commodity-wise
(comcode[str_detect(comcode$commoditycode,paste('^',com_id,sep='')),3])
```

```
## [1] "Prepared or preserved meat or offal of bovine animals (excl. sausages and similar products, finely ho
## [2] "Prepared or preserved meat or offal of bovine animals, uncooked, incl. mixtures of cooked meat or off
## [3] "Corned beef, in airtight containers"
## [4] "Meat or offal of bovine animals, prepared or preserved, cooked (excl. corned beef in airtight contain
```

1. GET COMTRADE DATA

```
source("get_Comtrade_data.R")
#Comtrade SQL request
stime <- Sys.time()
df1 <- get_Comtrade_data(201401,201601,"default",com_id,as.character(part_id))
etime <- Sys.time()
print(etime-stime)
```

```
## Time difference of 1.961415 mins
```

1.1 Tidy Comtrade data

```
#Group by commodity code for the same good if necessary (different cuts for chicken...)
print(unique(df1$commodity_code))
```

```
## [1] "160250"

df2 <- df1 %>% group_by(period,trade_flow,reporter,reporter_code,partner,partner_code) %>%
  summarize(net_weight_kg = sum(netweight_kg),
            trade_value_usd = sum(trade_value_usd)) %>% ungroup()
#Compute the price in usd per kg
df2 <- df2 %>% mutate(price_usd_kg = trade_value_usd/net_weight_kg)
#Turn period into a proper date
df2 <- df2 %>% mutate(period_date = ymd(paste(period,"01",sep="")))
#Remove missing observations
df2 <- df2[complete.cases(df2),]
#Get the comtrade data for imports into the uk for the given commodity
comtrade_imports_into_uk <- df2 %>%
  filter(reporter=="United Kingdom") %>%
  filter(trade_flow=="Imports")
```

1.2 Get partner country alpha from the code

```
cname <- country[country$countryname==unique(df1$partner),2]
```

2. GET HMRC DATA

```
source("get_HMRC_data.R")
source("get_HMRC_data_imports.R")
stime <- Sys.time()
if(cname %in% eu_list){
  print('It belongs to EU')
  HMRC_import_food_data <- get_HMRC_data(arrivals)
}else{
  print('It does not belong to EU')
  HMRC_import_food_data <- get_HMRC_data_imports(imports)
}
```

```
## [1] "It does not belong to EU"
## [1] "Medium cuppa?"
```

```
etime <- Sys.time()
print(etime-stime)
```

```
## Time difference of 7.139711 mins
```

```
(col_names <- t(as.data.frame(colnames(HMRC_import_food_data))))
```

```
##           [,1]      [,2]      [,3]
## colnames(HMRC_import_food_data) "comcode" "sitc" "record_type"
##           [,4]      [,5]      [,6]
## colnames(HMRC_import_food_data) "cod_sequence" "cod_alpha" "coo_sequence"
##           [,7]      [,8]      [,9]
## colnames(HMRC_import_food_data) "coo_alpha" "account_date" "port_sequence"
##          [,10]     [,11]     [,12]
## colnames(HMRC_import_food_data) "port_alpha" "flag_sequence" "flag_alpha"
##          [,13]
## colnames(HMRC_import_food_data) "country_sequence_coo_imp"
##          [,14]     [,15]
## colnames(HMRC_import_food_data) "country_alpha_coo_imp" "trade_indicator"
##          [,16]     [,17]
## colnames(HMRC_import_food_data) "container" "mode_of_transport"
##          [,18]     [,19]     [,20]
```

```
## colnames(HMRC_import_food_data) "inland_mot" "golo_sequence" "golo_alpha"
##                                [,21]          [,22]
## colnames(HMRC_import_food_data) "suite_indicator" "procedure_code"
##                                [,23]          [,24]          [,25]
## colnames(HMRC_import_food_data) "cb_code" "value" "quantity_1"
##                                [,26]
## colnames(HMRC_import_food_data) "quantity_2"
```

2.1 Tidy the data depending on EU/non-EU (arrivals/imports)

```
if(cname %in% eu_list){
  #Filter the data for the selected commodity_code
  tmp <- HMRC_import_food_data
  #tmp1 <- tmp %>% filter(str_sub(smkn_comcode,1,str_length(com_id)) == com_id)
  tmp2 <- tmp[str_detect(tmp$smkn_comcode,paste('^',com_id,sep='')),]
  #Remove crazy year
  current_year <- 2018
  tmp2 <- tmp2 %>% filter(as.numeric(smkn_period_reference)<100*(current_year+1))
  #Ignore some variables
  tmp2 <- tmp2 %>%
  select(-smkn_coo_seq,-smkn_coo_alpha) %>%
  select(-smkn_nature_of_transaction,-smkn_mode_of_transport,-smkn_no_of_consignments) %>%
  select(-smkn_suite_indicator,-smkn_sitc,-smkn_ip_comcode) %>% select(-smkn_supp_unit,-smkn_trade_ind,-smkn_re
  #Rename variables
  tmp2 <- tmp2 %>% rename(commodity_code = "smkn_comcode")
  tmp2 <- tmp2 %>% rename(partner_code = "smkn_cod_seq")
  tmp2 <- tmp2 %>% rename(partner_id = "smkn_cod_alpha")
  tmp2 <- tmp2 %>% rename(period = "smkn_period_reference")
  tmp2 <- tmp2 %>% rename(trade_value_spd = "smkn_stat_value")
  tmp2 <- tmp2 %>% rename(netweight_kg = "smkn_net_mass")
  #Sterling pounds to US dollars
  tmp2 <- tmp2 %>% mutate(trade_value_usd = trade_value_spd * 1.41) %>% select(-trade_value_spd)
}else{
  #Filter the data for the selected commodity_code
  tmp <- HMRC_import_food_data
  tmp <- tmp %>% select(comcode,cod_sequence,cod_alpha,account_date,value,quantity_1)
  tmp <- tmp %>% rename(commodity_code = "comcode")
  tmp <- tmp %>% rename(partner_code = "cod_sequence")
  tmp <- tmp %>% rename(partner_id = "cod_alpha")
  tmp <- tmp %>% rename(period_tmp = "account_date")
  tmp <- tmp %>% rename(trade_value_spd = "value")
  tmp <- tmp %>% rename(netweight_kg = "quantity_1")
  #Filter the data for the selected commodity_code
  tmp2 <- tmp[str_detect(tmp$commodity_code,paste('^',com_id,sep='')),]
  tmp2 <- tmp2 %>% mutate(period = paste(str_sub(period_tmp,4,7),str_sub(period_tmp,1,2),sep='')) %>% sel
  tmp2$partner_id <- gsub('GB', 'UK', tmp2$partner_id)
  #Remove crazy year
  current_year <- 2018
  tmp2 <- tmp2 %>% filter(as.numeric(period)<100*(current_year+1))
  #Sterling pounds to US dollars
  tmp2 <- tmp2 %>% mutate(trade_value_usd = trade_value_spd * 1.41) %>% select(-trade_value_spd)
}
```

2.2 Keep going... No matter the HMRC table, the data is in *tmp2*

```

#Group by commodity code for the same good if necessary (different cuts for chicken...)
print(unique(tmp2$commodity_code))

## [1] "16025031" "16025095" "16025010"

tmp3 <- tmp2 %>% group_by(period,partner_id,partner_code) %>%
  summarize(net_weight_kg = sum(netweight_kg),
            trade_value_usd = sum(trade_value_usd)) %>% ungroup()
#Compute the price in usd per kg
tmp3 <- tmp3 %>% mutate(price_usd_kg = trade_value_usd/net_weight_kg)
#Turn period into a proper date
tmp3 <- tmp3 %>% mutate(period_date = ymd(paste(as.character(as.numeric(period)),"01",sep="")))
#Remove missing observations
tmp4 <- tmp3[complete.cases(tmp3),]
tmp5 <- tmp4 %>% filter(trade_value_usd > 0 & net_weight_kg > 0)
#Get the comtrade data for imports into the uk for the given commodity
HMRC_imports_into_uk <- tmp5 %>% filter(partner_id ==cname)

```

3. Do the plots comparing both databases 3.1 Net weight in kg

```

ggplot(NULL) + geom_line(data=HMRC_imports_into_uk,
                        mapping = aes(x=period_date,y=net_weight_kg/1e6)) +
  geom_point(data=comtrade_imports_into_uk,
            mapping = aes(x=period_date,y=net_weight_kg/1e6),color="red",size=3) +
  labs(x="Period",y="Net weight (thousand of tons)")

```

3.2 Relative error

```

comb <- inner_join(comtrade_imports_into_uk, HMRC_imports_into_uk, by="period_date")
weight <- comb %>% select(starts_with("net_weight_kg"), period_date) %>%
  mutate(error = (100*(net_weight_kg.x-net_weight_kg.y)/net_weight_kg.y))
ggplot(data=weight, aes(x=period_date)) + geom_line(aes(y=error)) +
  geom_point(aes(y=error)) +
  labs(x="Period", y="Error (%)")

```
